

Visualization of data from assays in microtitre plate or slide format

The `plots` package provides a single function, `plotScreen`, for visualising data in microtitre plate or slide format. Here we show a short demo of its parameters. First, we generate example data:

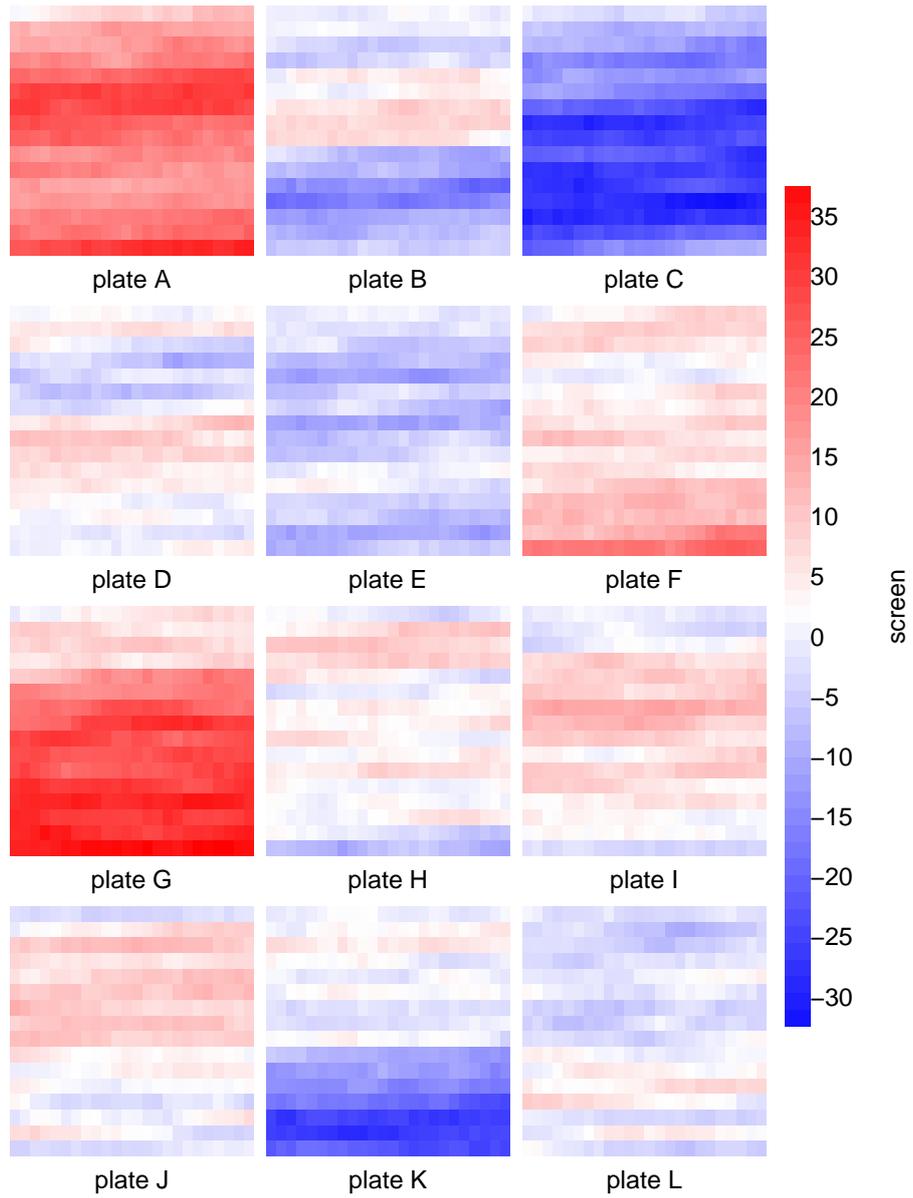

```
> library("plots")
> screen = lapply(1:12, function(i) cumsum(rnorm(384)))
> names(screen) = paste("plate", LETTERS[seq(along=screen)])
```

```
> toLatex(sessionInfo())
```

```
> plotScreen(screen, ncol=3)
```

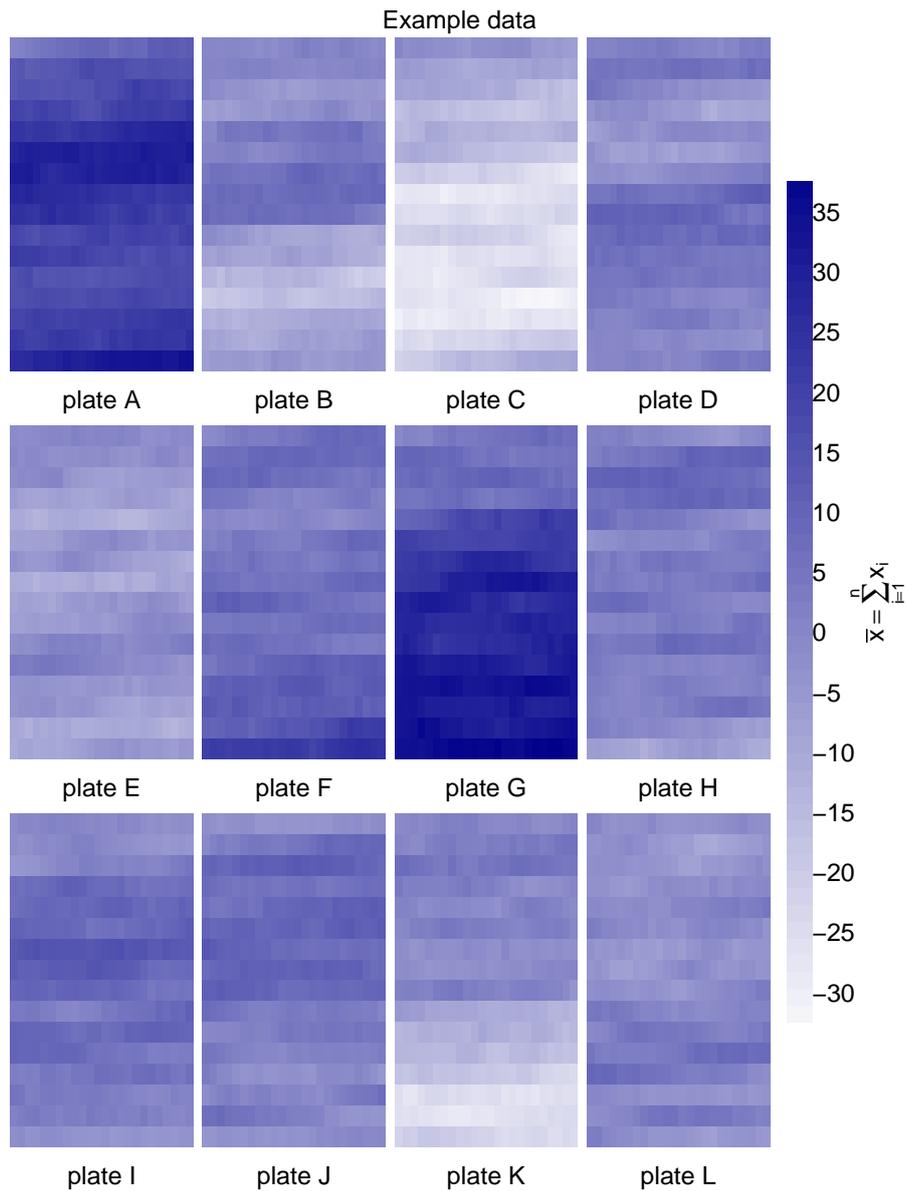

```
> plotScreen(screen, ncol=2, do.legend=FALSE)
```

```

> plotScreen(screen, ncol=4, fill=c("white", "darkblue"),
+           main="Example data",
+           legend.label=expression(bar(x) == sum(x[i], i=1, n)))

```

```
> for(i in seq(along=screen))  
+   screen[[i]][sample(384, 5)] = NA  
> plotScreen(screen, ncol=4, do.names=FALSE,  
+           main="Example data", legend.label="Legend label")
```
