Package 'knitrProgressBar'

July 23, 2024

Type Package

Title Provides Progress Bars in 'knitr'

Version 1.1.1

Description Provides a progress bar similar to 'dplyr' that can write progress out to a variety of locations, including stdout(), stderr(), or from file(). Useful when using 'knitr' or 'rmarkdown',

and you still want to see progress of calculations in the terminal.

BugReports https://github.com/rmflight/knitrProgressBar/issues

make_kpb_output_decisions

Progress Output Location

Description

Provides functionality to decide how the progress should be written, if at all.

Usage

Index

make_kpb_output_decisions()

Details

This function makes decisions about how the progress bar should be displayed based on whether:

- 1. The code is being run in an interactive session or not
- 2. The code is part of a knitr evaluation using knit() or rmarkdown::render()
- 3. Options set by the user. These options include:
 - (a) **kpb.suppress_noninteractive**: a logical value. Whether to suppress output when being run non-interactively.
 - (b) **kpb.use_logfile**: logical, should a log-file be used for output?
 - (c) kpb.log_file: character string defining the log-file to use. kpb.use_logfile must be TRUE.
 - (d) **kpb.log_pattern**: character string providing a pattern to use, will be combined with the chunk label to create a log-file for each knitr chunk. **kpb.use_logfile** must be TRUE.

Based on these, it will either return a newly opened connection, either via stderr(), stdout(), or a file connection via file("logfile.log", open = "w"). Note that for files this will overwrite a previously existing file, and the contents will be lost.

Value

a write-able connection or NULL

progress_estimated

Examples

```
## Not run:
# suppress output when not interactive
options(kpb.suppress_noninteractive = TRUE)
# use a log-file, will default to kpb_output.txt
options(kpb.use_logfile = TRUE)
# use a specific log-file
options(kpb.use_logfile = TRUE)
options(kpb.log_file = "progress.txt")
# use a log-file based on chunk names
options(kpb.use_logfile = TRUE)
options(kpb.log_pattern = "pb_out_")
# for a document with a chunk labeled: "longcalc", this will generate "pb_out_longcalc.log"
## End(Not run)
```

progress_estimated Progress bar with estimated time.

Description

This provides a reference class representing a text progress bar that displays the estimated time remaining. When finished, it displays the total duration. The automatic progress bar can be disabled by setting progress_location = NULL.

Usage

```
progress_estimated(
    n,
    min_time = 0,
    progress_location = make_kpb_output_decisions()
)
```

Arguments

| n | Total number of items | | | | | | | |
|---------------------|--|--|--|--|--|--|--|--|
| <pre>min_time</pre> | Progress bar will wait until at least min_time seconds have elapsed before displaying any results. | | | | | | | |
| progress_location | | | | | | | | |
| | where to write the progress to. Default is to make decisions based on location type using make_kpb_output_decisions(). | | | | | | | |

Value

A ref class with methods tick(), print(), pause(), and stop().

See Also

make_kpb_output_decisions()

Examples

```
p <- progress_estimated(3)</pre>
p$tick()
p$tick()
p$tick()
p <- progress_estimated(3)</pre>
for (i in 1:3) p$pause(0.1)$tick()$print()
p <- progress_estimated(3)</pre>
p$tick()$print()$
pause(1)$stop()
# If min_time is set, progress bar not shown until that many
# seconds have elapsed
p <- progress_estimated(3, min_time = 3)</pre>
for (i in 1:3) p$pause(0.1)$tick()$print()
## Not run:
p <- progress_estimated(10, min_time = 3)</pre>
for (i in 1:10) p$pause(0.5)$tick()$print()
# output to stderr
p <- progress_estimated(10, progress_location = stderr())</pre>
# output to a file
p <- progress_estimated(10, progress_location = tempfile(fileext = ".log"))</pre>
## End(Not run)
```

set_progress_mp multi process progress indicator

Description

Sets up a progress object that writes to a shared file to indicate the total progress. Progress can be monitored by watch_progress_mp.

Usage

set_progress_mp(write_location = NULL)

Arguments

write_location where to save progress to

update_progress

Value

ProgressMP

See Also

watch_progress_mp

update_progress updating progress bars

Description

Takes care of updating a progress bar and stopping when appropriate

Usage

update_progress(.pb = NULL)

Arguments

. pb the progress bar object

Value

the progress bar

watch_progress_mp watch progress from multi process

Description

sets up a "watcher" function that will report on the progress of a multi-process process that is being indicated by set_progress_mp.

Usage

```
watch_progress_mp(
    n,
    min_time = 0,
    watch_location = NULL,
    progress_location = make_kpb_output_decisions()
)
```

Arguments

| | n | number of times process is running | | | | | |
|-------------------|----------------|--|--|--|--|--|--|
| | min_time | how long to wait | | | | | |
| | watch_location | where is the progress being written to | | | | | |
| progress_location | | | | | | | |
| | | where to write the progress output | | | | | |

Value

ProgressMPWatcher
